INTRODUCTION

The principle purpose of the Timber Utilization Survey is to provide reliable information on primary industrial fibre consumption as a basis for forest resources management planning. It also provides information on individual mill consumption, as well as, fibre imports and exports.

The data present in the report summarizes information collected by the Department's Regional staff for the fiscal year April 1, 2004 to March 31, 2005. All pulp and paper mills, fibreboard and plywood plants were sampled. However, only those sawmills consuming more than 500 m³ of roundwood were included in the survey. As a result, total roundwood consumption may be slightly higher than the survey indicates.

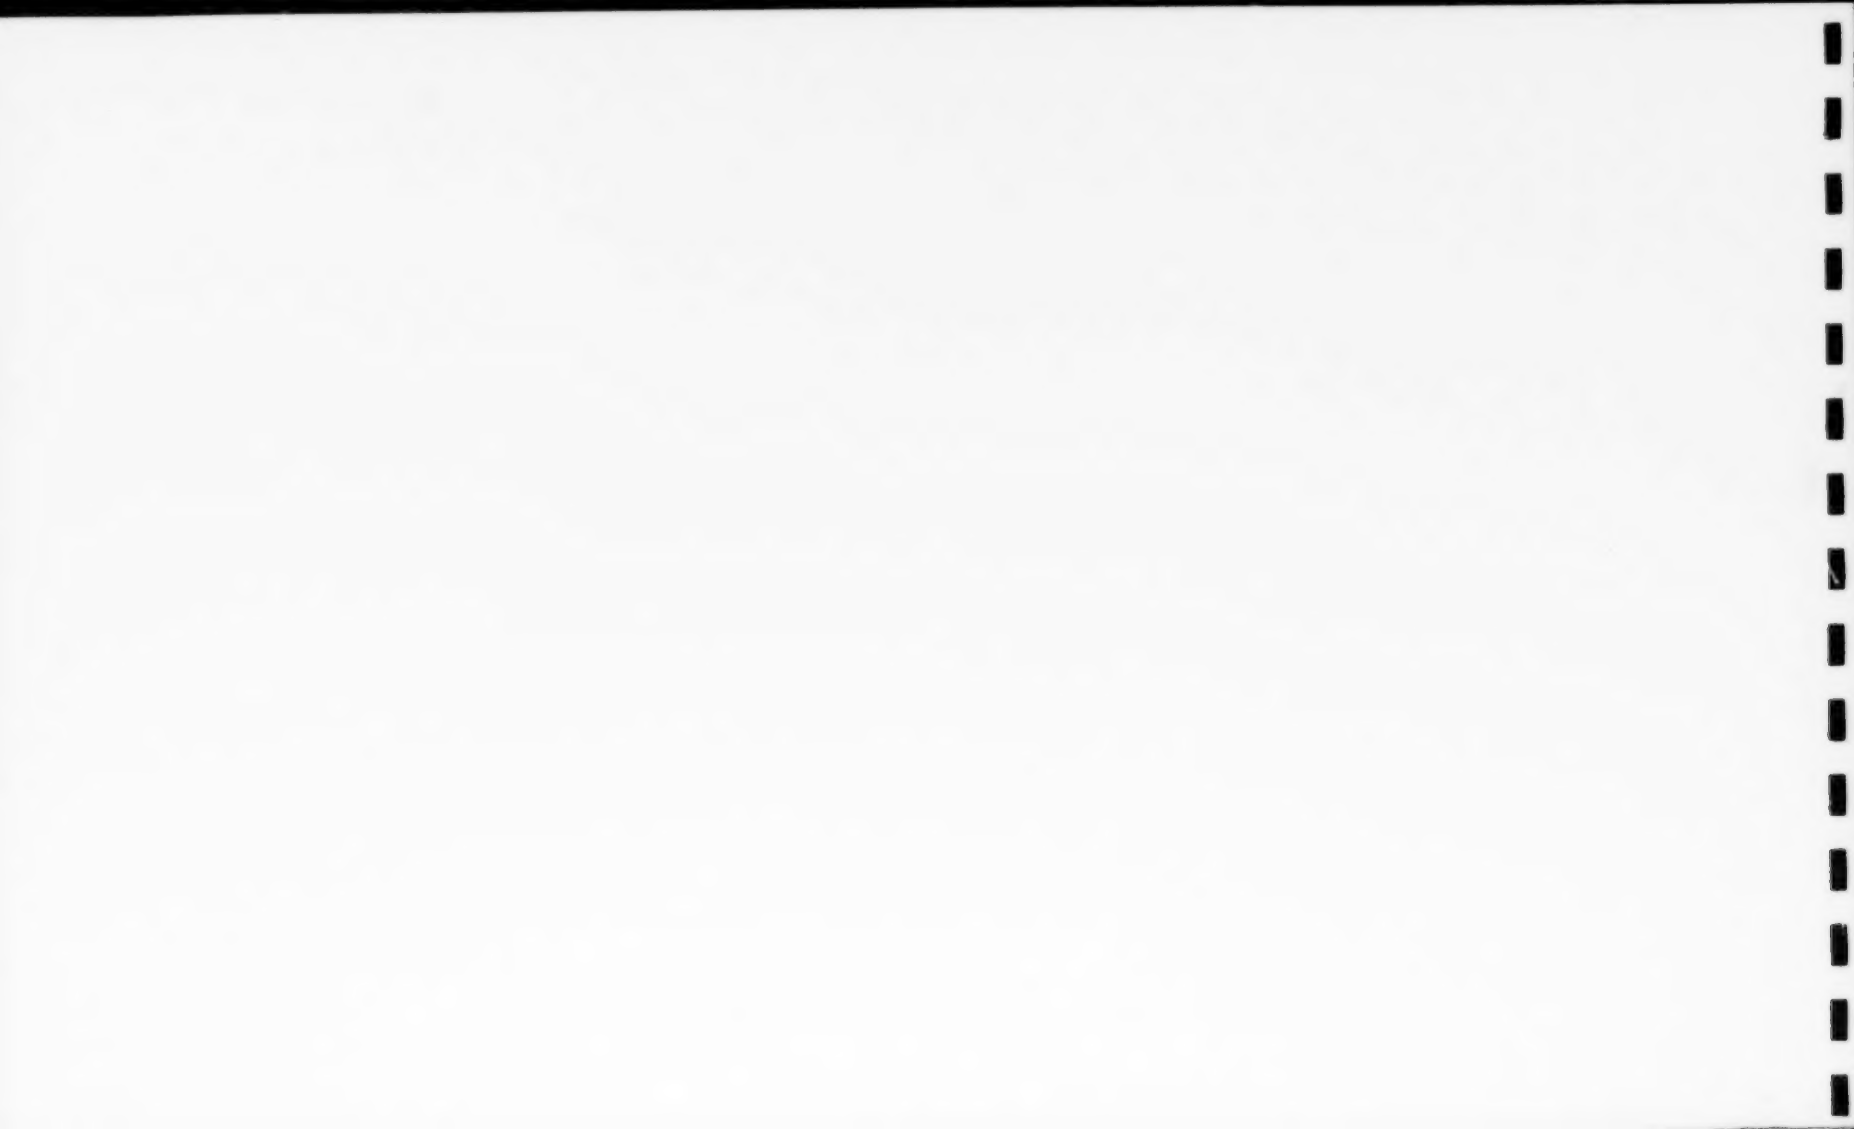

The figures appearing in Part I summarize the industrial roundwood harvest and consumption from various sources by industry type. Part II lists individual mill consumption by source and species. Part III lists those pulp and paper mills consuming chips and other residue, as well as, individual sawmills producing such chip and residue. Part IV lists all mills importing and exporting roundwood chips and other residue by industry type.

All figures presented in the following tables are in cubic metres. The appropriate conversion factors may be found in Appendix I at the back of the report.
